Unique Alpine risks

Avalance risk.

RAL safety services will manage this risk.

Volcanic risk.

Volcanic mudflow (Lahar) travel in valleys primarily. Refer to Hazard Map over page. Move to high ground.

Alpine Weather.

All personel on site must be suitably equipped for alpine conditions at all times

UV sun exposure is intense at altitude.

Sunscreen should be applied. Eye protection should be worn - goggles or glasses.

Icy conditions underfoot and on structures.

All personel must have appropriate footwear and other personal protection such as helmets when appropriate.

Health and Safety Info

VOLCANIC HAZARDS AT WHAKAPAPA MT RUAPEHU

Version 6.0 2019

gns.cri.nz/volcano-hazard-maps

HAZARDS

Ruapehu is an active volcano.

Eruptions generate lahars (volcanic mudflows).

Lahars flow down valleys in a flash flood.

During an eruption, gas and flying rocks may occur within the summit hazard zone.

A lahar in 1995 narrowly missed the bottom of the Far West T Bar.

IF YOU ARE:

IN A BUILDING/CAR PARK

> Stay put and await further instructions.

IN A VALLEY

> Move out of the valley to a ridge top.

IN THE SUMMIT ZONE

> Move down the mountain following ridges.

WhakapapaHAZARDMAPV620191406.pdf

WARNING SYSTEM

An Eruption Detection System (EDS) is operating in the ski area. The system will set off sirens and loudspeaker messages.

Disclaimer

This map covers expected events. Volcanic activity and other unforeseen factors may alter features on this map, so safe and hazardous areas may change without notice.
